

Granting API Access

A DiVA user must be granted the following two permissions prior to use of the **DiVA API**.

1. Permissions

- a. Navigate to **ADMIN > MANGEMENT** and click the **10. Permissions** option.
- b. Select from the **Select Permission** pull-down list the Permission group that is assigned to the user to be granted API access.
- c. Click to select the **Allow** option next to the **API** permission item.
- d. Click **Save Changes**.

2. API Key Generation

- a. Navigate to **ADMIN > MANAGEMENT** and click the **14. Users** option.
- b. Select the desired user from the **Select User** pull-down list.
- c. In the API Access area, click the **Issue Access** button.
- d. Provide the **API Key** to the user.

Notes:

- If either of the above permissions is removed then access to the API will be revoked.
- Unless all members of the user's current permission group are to be authorized for API use, then the user must be added to another existing permission group (with the API permission already set), or a new permission group must be added for that user.
